1. Executive summary

Over the past 16 months (M2-M18), the GEEK4Food project has actively engaged in a variety of communication efforts to promote its objectives and achievements. These activities have played a crucial role in broadening our reach and deepening our impact:

- **Events:** We have hosted and participated in numerous events, targeting audiences outside our consortium. Notable among these was the Food Innovation Asia Conference 2024, which attracted over 300 participants from diverse sectors, and the Skill Sync EU event, which focused on bridging AI skill gaps in the agri-food sector.
- **Media:** Our engagement extended online with regular blog updates, keeping the public and stakeholders informed. A key highlight was our coverage of the "Training for the future" workshop, which was aimed at equipping educators with cutting-edge methodologies for the agri-food sector.
- **Digital presence:** We strengthened our online footprint through our website and social media, continually optimising our approach based on analytics of user engagement.
- **Promotional materials:** We developed and distributed a variety of materials, including brochures and posters, tailored to convey key information about the project effectively at various events and online platforms.

This document represents the first of three reporting deliverables, with the final report scheduled for delivery at month 36 of the project.

2. Introduction

This deliverable provides an in-depth overview of the GEEK4Food (G4F) project's communication and dissemination activities from M2 to M18. It outlines the various methods and channels the project has used to share its progress and results with a broad audience. This includes stakeholders from different sectors and the public. According to the Dissemination strategic plan (D8.1), efforts have been concentrated across several key areas: hosting events, maintaining a robust digital presence, engaging with media, and effectively using promotional materials.

By organising and participating in various events such as conferences, workshops, and seminars, the consortium has engaged directly with external stakeholders, fostering discussions and idea sharing. The project's digital efforts focus on maintaining a strong online presence, using the project website and social media platforms to connect with a broader audience. Regular blog posts keep the project's audience informed and engaged with its developments.

Additionally, promotional materials like brochures and posters have clearly communicated the project's objectives and achievements. These materials ensure that essential information is easily accessible and widely disseminated.

This document represents the first of three reporting deliverables, with the final one scheduled for M36.

1.1. GEEK4Food visual identity

The visual representation of GEEK4Food includes the following elements:

Logo

Colour palette

#373381

#0D2CCF

#35A7DC

#87BD40

#6DC0C7

Typography

Titillium web

Heading 1

Heading 2

Heading 3

Arial

The July sun caused a fragment of black pine wax to ooze on the velvet quilt.

Six javelins thrown by the quick Argives whizzed forty paces beyond the mark.

The GEEK4Food colour palette and typography have been slightly revised, with one of the palette colours changing from #1B55A4 to a brighter blue (#0D2CCF). Additionally, the body text has been updated from *Poppins* to *Arial* to create a cleaner and more professional look. For a detailed comparison of these changes, please refer to Deliverable 8.1.

These and other visual identity elements are now being used across all project communication and dissemination materials.

3. Activities and channels

From M2 to M18, the G4F project conducted various communication and dissemination activities to share the project's progress and results with a broad audience. These activities included:

- **Events:** conferences, workshops, and seminars aimed at stakeholders outside the consortium. Each event's details, such as dates, locations, number of attendees, and target audiences, are documented.

- **Media and press:** blog posts and press release activities to highlight the project's visibility in the public domain.
- **Digital presence:** active digital presence through the project’s website and social media. Metrics such as website visits, social media followers, and engagement levels are provided.
- **Promotional materials:** posters to support the dissemination efforts.

3.1 Events

This section highlights engagements such as networking activities, meetings or webinars, and conferences that are contributing to the visibility and impact of GEEK4Food. These events span various geographic locations and are attended by various stakeholders, including higher education institutions, research centres, professional organisations, and industry professionals. For example, the Skill Sync EU meeting was a focused networking session to discuss AI skill gaps relevant to the agri-food sector, attracting key stakeholders and fostering targeted dialogue around innovative educational outcomes. The Food Innovation Asia Conference 2024 (FIAC24) served as a significant platform for discussing innovation in the food system and presenting the GEEK4Food project, with over 300 attendees from multiple sectors.

Table 1 summarises event details such as dates, locations, attendee numbers, and target audiences.

Table 1 – GEEK4Food events

Event	Date	Location	Attendees number	Target audience
Strategic Foresight and the Future of the Food System Transition by 2040 Workshop (organised by the GEEK4Food project team)	12.01.2024	Technical University Dublin, Ireland	21	Higher Education (teachers, researchers), Research centres, Organisations, Associations of stakeholders, Professionals and consultancy
NEMOS project meeting	13.03.2024	Dublin, Ireland	12	Higher Education (teachers, researchers)
Agri-food Pact for Skills	11.04.2024	Bruxelles, Belgium	40	Higher Education (teachers, researchers), Research centres, Organisations, Associations of stakeholders, Professionals and consultancy

Food Innovation Asia Conference 2024	15.06.2024	Bangkok, Thailand	300	Higher Education (teachers, researchers), Research centres, Industry, Organisations, Associations of stakeholders
CASEE 2024 Conference	19.06.2024	USAVM Cluj Napoca, Romania	150	Higher Education (teachers, researchers), Research centres, Organisations, Associations of stakeholders, Professionals and consultancy
Training for the future: innovative design methods to advance agri-food education (organised by the GEEK4Food project team)	20.06.2024	CASEE 2024 Conference, USAVM Cluj Napoca, Romania	11	Higher Education (teachers, researchers), trainers at the higher education and professional levels
UNIFOODS 2024	28.06.2024	Belgrade, Serbia	200	Higher Education (teachers, researchers), Research centres
Skill Sync EU meeting	12.07.2024	Online	6	Organisations, Associations of stakeholders

3.2 Media

This section of the deliverable summarizes how GEEK4Food’s developments and insights have been communicated to the public and stakeholders via media channels, particularly through blog posts on the GEEK4Food website. These blog entries are essential for disseminating information about the project's progress, achievements, and future plans in an accessible yet thorough manner.

The inaugural blog post, "[Training for the future: working with agri-food educators for future challenges](#)," published on 11 July 2024, exemplifies our strategic approach to outreach. It describes an educators’ workshop at the University of Agricultural Sciences and Veterinary Medicine in Cluj-Napoca on 20 June 2024. This event aimed to equip educators with innovative methodologies for addressing current and future challenges in the agri-food sector.

Training for the future: working with agri-food educators for future challenges

11 Jul 2024 3 min

Fig. 1 – Screenshot of the blog post “Training for the future: working with agri-food educators for future challenges”

3.3 Digital presence

This section outlines our project's digital presence across various online platforms, highlighting how our content and interactions are engaging our target audience. It includes detailed analytics from our project website and social media activities, specifically focusing on LinkedIn (*Table 2*). These insights help us understand the effectiveness of our digital communication strategies and guide future content and engagement efforts.

[Annex 1](#) includes a collection of GEEK4Food and Partners’ LinkedIn posts.

3.3.1 Definitions of metrics

Project website Google Analytics metrics:

- **All visitors:** The total number of unique users who have visited the website during the specified period.
- **Total sessions:** Measure the total number of user interactions with the GEEK4Food website during a specified period. Each session includes all activities from when a user enters the site until they leave or become inactive.

- **Session duration:** The weighted average session duration is calculated by summing the total time spent on the GEEK4Food website and dividing it by the total number of sessions.
- **Engagement rate:** The percentage of sessions in which the user interacted actively with the content beyond mere page loading, such as clicking and navigational events.

LinkedIn metrics:

- **Followers:** The number of LinkedIn users who follow the GEEK4Food page to receive updates directly in their feed.
- **Reactions:** The total count of emotional responses (Like, Love, Insightful, etc.) that users have given to the GEEK4Food posts.
- **Comments:** The number of comments made on posts.
- **Reposts:** The number of times the content has been shared or reposted by users on their own LinkedIn profiles or with their networks.

Table 2 – Digital engagement metrics summary

Digital channel	Metric	Value
Project website ¹	All visitors	116
	Total sessions	138
	Session duration	1m 31s
	Engagement rate	60%
Social media - LinkedIn ²	Followers	151
	Reactions	213
	Comments	20
	Reposts	11
	Visitor demographics by job function	
	Programme and project managers	60%
	Research	10%
	Business development	10%
	Engineering	10%
	Others	10%

¹ The data presented spans the most recent 30-day period, coinciding with the activation of the GEEK4Food’s Google Analytics tracking one month ago.

² Last 365 days.

GEEK4Food partners have been sharing the project's activities through their digital platforms, including websites (*Table 3*) and social media (*Annex 1*).

Table 3 – Partners’ websites and promotion of GEEK4Food

3.4 Promotional materials

This section details the range of promotional materials created to support the dissemination and communication efforts of our project. These materials are designed to effectively convey key information about the project's objectives, progress, and outcomes to diverse audiences. Included in this section are descriptions and visuals of the various types of materials developed, such as brochures, posters, and roll-ups, each tailored to specific promotional needs and settings.

Furthermore, [Annex 2](#) includes two versions of the GEEK4Food PowerPoint templates currently in use by the partners.

3.4.1 Brochures

Brochures are a key component of the GEEK4Food outreach efforts, designed to provide concise, yet comprehensive information about the project. They highlight key objectives, achievements, and future directions in an easily digestible format.

Two types of brochures are utilised:

- **General printable brochure:** This brochure provides an overarching view of the GEEK4Food project, including its objectives, activities, and expected outcomes. It is designed to be printed and distributed at various events, such as conferences and workshops, to inform and engage a broader audience, including policymakers, industry professionals, and the general public. This brochure ensures that essential information about the project is readily available in a tangible format.
- **Event-specific brochure** (see *Fig. 3* for an example): This type of brochure is tailored for specific events and is designed for online and on-site dissemination. It includes detailed information

about the event, the project's role in it, and how attendees can engage with GEEK4Food's initiatives, etc. This brochure is interactive and easily accessible through digital platforms, making it ideal for pre-event promotion and on-the-go access during the event.

In the last 50 years, we have improved our food production to fight hunger and poverty, but this has caused environmental and health issues.

The way we produce and consume food is hurting our planet and contributing to health problems, like heart disease and diabetes. We need to change our food systems to better respect our planet's limits and improve our health.

This includes adopting the **"Food-Health-Planet"** and **Bioeconomy** approaches, considering how our diet affects both our health and the environment, and how to use renewable biological resources in a sustainable manner.

GEEK4Food aims to transform the agri-food approach to education through the use of a smart intervention model, the 3P-G4F Hub. Using artificial intelligence, this platform assesses skills gaps within the sector and provides tailored training and professional growth paths to bridge them. It also creates an ecosystem where learners, Higher Education institutions (HEIs), and food sector organisations interact seamlessly.

The project will also embark on a Foodathon endeavour, a collaborative event where stakeholders will brainstorm solutions to improve the food systems.

"Glocal Ecosystems and Expanded Knowledge for skills and capabilities in the food sector" (GEEK4Food) is about creating a practical, cross-industry system that will help the food sector become more green and sustainable. It aims to do this by developing innovative AI-powered tools designed to foster a culture of continuous learning and skill enhancement, benefiting both the existing workforce and aspiring professionals in the food industry. By leveraging advanced artificial intelligence, the project aims to reshape the way knowledge and skills are developed and applied in the food sector, addressing both local and global sustainability challenges.

GEEK4Food is designed around a **three-step model**, each answering a key question: 'What now?', 'Now what?', and 'What for?', to methodically progress from identifying needs to implementing solutions and ultimately fostering policy innovation and evaluating project impact.

In the initial phase, '**What now?**', our focus is on the development of two key tools: an AI-powered tool to predict green skills needed (GST-G4F) and an interactive platform (3P-G4F) to connect training providers, job seekers, and sector demands. The dual purpose of these tools is to catalyse effective training strategies and to guide investments towards the most pertinent emerging green skills.

Progressing to the '**Now what?**' stage, our attention shifts to the design and implementation of targeted training solutions to support green skill development in Higher Education, upgrade professionals' skills, and pilot innovative training initiatives. This stage is crucial for translating identified skill needs into tangible educational offerings and professional development opportunities.

The final stage, '**What for?**', extends our vision to encompass policy innovation to foster green and sustainable approaches in the food system, driving change and evaluating project impact.

3.4.2 Posters

Posters are visual tools to essential for attracting attention and conveying important information at events, conferences, and other public spaces.

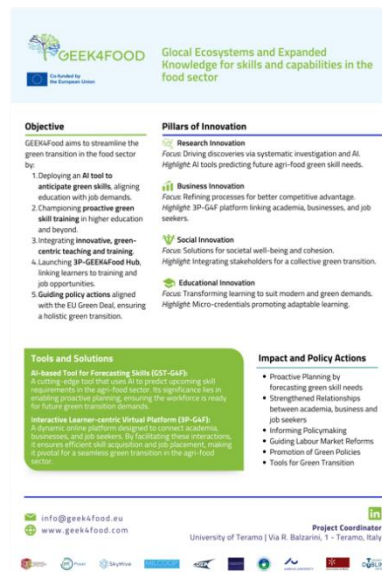

We utilise two main types of posters within the GEEK4Food project:

1. **Event-specific posters:** These are tailored to specific events, conferences, or public spaces where the project is being presented or discussed. They are designed to resonate with the particular themes and audiences of each event, providing relevant information and visuals that highlight the specific aspects of the project pertinent to that gathering.
2. **General project posters:** In addition to event-specific materials, we have developed a general poster that serves as an all-encompassing representation of the GEEK4Food project. This poster, as exemplified in the provided image (Fig. 4), outlines the overarching objectives and key innovations of the project.

2nd project meeting poster

GEEK4Food general poster

Department of Food Science, AU FOOD, as partner of the GEEK4Food Erasmus+ project, invites you to register for the **"Training for the Future: Innovative Design Methods to Advance Agri-Food Education"**, a GEEK4Food educators' workshop that will take place as a side event **in the upcoming CASEE 2024 Conference scheduled for June 19-21** in the beautiful city of Cluj-Napoca. This session is designed to equip educators and trainers with the tools and methodologies needed to shape the future of agri-food education. 🌱 Join the workshop and improve your teaching portfolio, delve into the complexities of sustainable food systems, and design transformative educational courses.

📅 Secure your spot by registering at <https://lnkd.in/dmpJeTX9>
📄 For detailed information and workshop's agenda leaf through the brochure here: <https://lnkd.in/dqJWG3c>.

👉 GEEK4Food project meeting and "Train the Trainers" workshop 👉

Department of Food Science, AU FOOD is glad to introduce you again the #GEEK4Food project, a forward-looking Erasmus+ project.

In June 2024, the project's consortium meeting was hosted by the #University of Agricultural Sciences and Veterinary Medicine during the #CASEE 2024 conference in #ClujNapoca. Members from each work package provided updates on their perspective area of focus and key decisions were taken for the project's next steps.

As a side event, the #GEEK4Food consortium team organized a "Training for the Future: Innovative Design Methods to Advance Agri-Food Education" workshop. The training, offered free of charge to academic staff, aims to impart skills and methods for designing effective and efficient courses to equip talents within the agri-food systems with necessary competencies. This one-day workshop, dedicated to educators and curriculum designers, introduced innovative approaches for designing courses that achieve the learning outcomes necessary for the twin transition.

A special thank you to the #University of Agricultural Sciences and Veterinary Medicine for hosting the GEEK4Food team, and especially to Dan C. Vodnar, CALINOIU LAVINIA, Laureana Mitrea and Diana Pîlămadă for their work behind the scenes and their positive energy and enthusiasm!

To learn more about the GEEK4Food project, visit the website: www.geek4food.com

I had the pleasure to attend the #CASEE 2024 conference in #ClujNapoca and listen to the inspiring presentations of the key speakers, Pr. PAOLA PITTIA and Dr. Mario Roccoaro, on the role of life sciences universities in the green transition of Central and Eastern Europe.

After the #GEEK4Food project consortium meeting, the project's team organised a "Training for the future" workshop, whose aim was to offer educators, PhD students and postdoctoral fellows some innovative design approaches for designing courses to advance #agrifood #education.

I had the honor of being one of the event's speakers and one of the workshop's groups' facilitators.

A big thank you to the University of Agricultural Sciences and Veterinary Medicine for hosting me, to the #GEEK4Food team for this highly productive meeting and the great collaboration experience and especially to Dan C. Vodnar, CALINOIU LAVINIA, Laura Mitrea and Diana Pîlămadă for their work behind the scenes.

5. Annex 2: PowerPoint Templates

At the outset of the project, WP8 developed the initial GEEK4Food presentation template. The template has now been revised based on data collection, feedback interpretation, and to ensure alignment with the design of the 3P-G4F platform currently in development.

While both versions of the template are available for use by GEEK4Food partners, it is recommended that the updated version be used, particularly for communication and dissemination activities outside the consortium.
